ABSTRACT

Poly-Lysine Coverslip Preparation

This section describes the process of creating Poly-lysine-coated coverslips that are used for the tissue sections in the CODEX® experiment workflow.

GUIDELINES

- Managers and supervisors - are responsible for making sure that technicians are properly trained and equipment and facility are maintained in good working order.
- Laboratory personnel - are responsible for reading and understanding this SOP and related documents and to perform these tasks in accordance with the SOPs.

MATERIALS

NAME	CATALOG #	VENDOR
WypAll™ L30 Multipurpose Wipers	19168203	Thermo Fisher
Parafilm Wrap PM996, 4 in. Wide, 125 ft./Roll	CP0672040	Thermo Fisher
Dumont Forceps (Cover Slip Forceps)	11251-33	Fine Science Tools
EMS Glass Cover Slips 22mm x 22mm	72204-01	Electron Microscopy Sciences
Poly-L-lysine 0.1% (w / v)	P8920	Sigma Aldrich

SAFETY WARNINGS

- Use physical safety precautions when working with sharps (disposable blades, coverslips, etc).

BEFORE STARTING

- Be sure to gather all the appropriate materials listed in this protocol before starting.
- You will need a sanitized or acid-washed beaker for this procedure.

1 Remove the EMS cover-slips from box. 1m

CODEX requires use of these specific cover-slips for their diagnostic process.

2 Gently place the desired amount of cover-slips that you wish to coat in solution at the bottom of a sterilized glass beaker. 1m

3 Slowly swirl the beaker to spread the cover-slips around the base. 30s

4 Add 7 mL of poly-lysine solution above the cover-slips to ensure that all are fully covered. 2m

7 ml Poly-Lysine

5 Cover the beaker with plastic wrap or parafilm, and secure tightly with a rubber band to prevent evaporation. 2m

6 12h

Leave cover-slips in poly-lysine solution for a **minimum** of 12 hours and up to one week **at room temperature**.

12:00:00 or up to one week.

7 After waiting the required incubation period, carefully remove the rubber band and parafilm from around the neck of the beaker. 2m

8 Gradually pour the remaining poly-lysine solution into the proper waste container. 2m

9 Fill the same beaker containing the cover-slips to half volume with double-distilled water(ddH20) or purified water. 2m

10 Swirl the contents to mix the solution. 1m

11 ⚠ 30s

Let the beaker and cover-slips sit for 30 seconds.

To prevent removal of poly-lysine, do not soak in water for >1 minute during each washing step.

12 Slowly pour off the water into the sink. This completes **Wash #1** 30s

13 **go to step #9 and repeat steps 9-12 (Wash #2)** 1m 30s

14 **go to step #9 and repeat steps 9-12 (Wash #3)** 1m 30s

15 **go to step #9 and repeat steps 9-12 (Wash #4)** 1m 30s

16 **go to step #9 and repeat steps 9-12 (Wash #5)** 1m 30s

17 **go to step #9 and repeat steps 9-12 (Wash #6)** 1m 30s

18 **go to step #9 and repeat steps 9-12 (Wash #7)** 1m 30s

19 After completing the 7 washes, place 2 Wypall towels or lint-free paper towels on the bench top. 30s

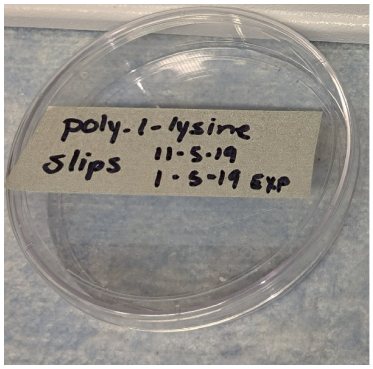
20 Remove the cover-slips from the water, placing them on top of the first set of towels.
Ensure the cover-slips are not overlapping to allow proper drying. 2m

21 Using the specialty forceps indicated for use by CODEX,
flip over each cover-slip onto the second clean towel to dry the reverse side.

Specialty forceps indicated in the materials section.

22 Leave the cover-slips on the Wypall towel to dry.

23 When the cover-slips are dry, the Poly-Lysine-coated cover-slips can be stored in a sanitized petri dish or similarly covered container for up to 2 (two) months.



Sanitized Petri Dish containing the finished Poly-l-Lysine coated cover-slips for CODEX processing.
