

Peripheral Blood Mononuclear Cells (PBMC) and plasma isolation from whole peripheral blood

Jennifer L. Dembinski, Miloje Savic

Abstract

This protocol describes isolation of PBMC from human whole peripheral blood samples by density gradient centrifugation, using One SepMate-50ml tube (<https://www.stemcell.com/sepmate-trade-hassle-free-pbmcs-in-just-15-minutes.html>), followed by freeze and thaw protocol.
