 Xiaobei Si 

ABSTRACT

Background: In recent years, many studies reported the anti-Hp effects of Traditional Chinese Medicine. Based on these studies, there had been many relevant systemic reviews and meta analyses with variable results

Aim: This overview aims to investigate the general characteristics and assess the methodological quality of these systemic reviews/meta analyses (SR/MAs).

Methods: We included systemic reviews/meta analyses with comparison of Chinese medicine and western medicine on helicobacter pylori infection by searching databases of Medline, Embase, Web of Science, China National Knowledge Infrastructure Database (CNKI), Chinese VIP Information (VIP), Chinese Medical Databases (CMB) and Wan-Fang Database until December 16th, 2018. AMSTAR and PRISMA tools were adopted to assess the methodological quality and reporting characteristics respectively.
