ABSTRACT

Protocol can be used after: Plant Infection with *Xanthomonas Campestris* Campestris

GUIDELINES

Depending on the country, *X. campestris* may be an quarantine organism. Please make sure you follow the specific guidelines of your country.

MATERIALS TEXT

sthree-week-old Brassica oleracea plants in climate chamber

Needle

1 uM flg22 at room temperature

Day 1

- 1 Place 15 μ l of flg22 3 cm above the lesion on the central vein of the leaf.
- 2 With the needle puncture through the droplet into the central vein three times. Do not puncture the leaf completely. Due to a difference in pressure, the droplet should be sucked into the xylem.
- 3 Place a second 15 μ l of flg22 3.5 cm above the lesion on the central vein of the leaf.
- 4 Repeat step 2.
