Protocol

Step 1.

If you have large amount of data and/or it exists on a remote server, you may find it easiest (and fastest) to use [iCommands](#) to 'iput' your data into your iPlant/CyVerse 'home' directory.

```
[hpc:service0@/rsgrps/bhurwitz/hurwitzlab/data/kyclark]$ ls
ITS_R1.fastq.gz ITS_R2.fastq.gz
[hpc:service0@/rsgrps/bhurwitz/hurwitzlab/data/kyclark]$ module load irods
[hpc:service0@/rsgrps/bhurwitz/hurwitzlab/data/kyclark]$ iput ITS_R1.fastq.gz
```

Step 2.

Alternately, you can login to the [Discovery Environment](#) and choose the "Data" button on the left top open the Data window. From there you can find your username/home directory and choose the "Upload" button on the "Data" window's command bar.
