Published: 01 Apr 2017

Protocol

Step 1.

Mix concentrated Euplotes cells together with Ethanol 70% in a ratio of 1:1.

NOTES

Rachele Cesaroni 01 Apr 2017

Better to have a completely starved Euplotes culture to avoid autofluorescence from bacteria/algae.

Step 2.

Add DAPI (0.01 mg/ml) to the mix in a ratio of 1:10, and stain for 15 minutes at room temperature.

Step 3.

Observe cells by fluorescence microscope.
