ABSTRACT

Implemented by: Patrick Edger and J. Chris Pires

For a small number of samples the Invitrogen [PureLink™ RNA Mini Kit](#) (Cat #12183-018A) was used to isolate total RNA while the Qiagen RNeasy [MinElute Cleanup Kit](#) (Cat #74204) was used to purify and concentrate total RNA. The methods followed the manufacturer's instructions and thus they are not repeated here.

This protocol is part of a collection of eighteen protocols used to isolate total RNA from plant tissue. (RNA Isolation from Plant Tissue Collection: <https://www.protocols.io/view/rna-isolation-from-plant-tissue-439gyr6>)
