Biosys-analytics

Bonnie Hurwitz
University of Arizona

ABSTRACT

The github repository will serve as a location for you to turn-in your homework, and allow the instructors to push back code modifications and suggestions.

PROTOCOL STATUS

Working

We use this protocol in our group and it is working

BEFORE STARTING

Sign up for a free Github account: http://github.com
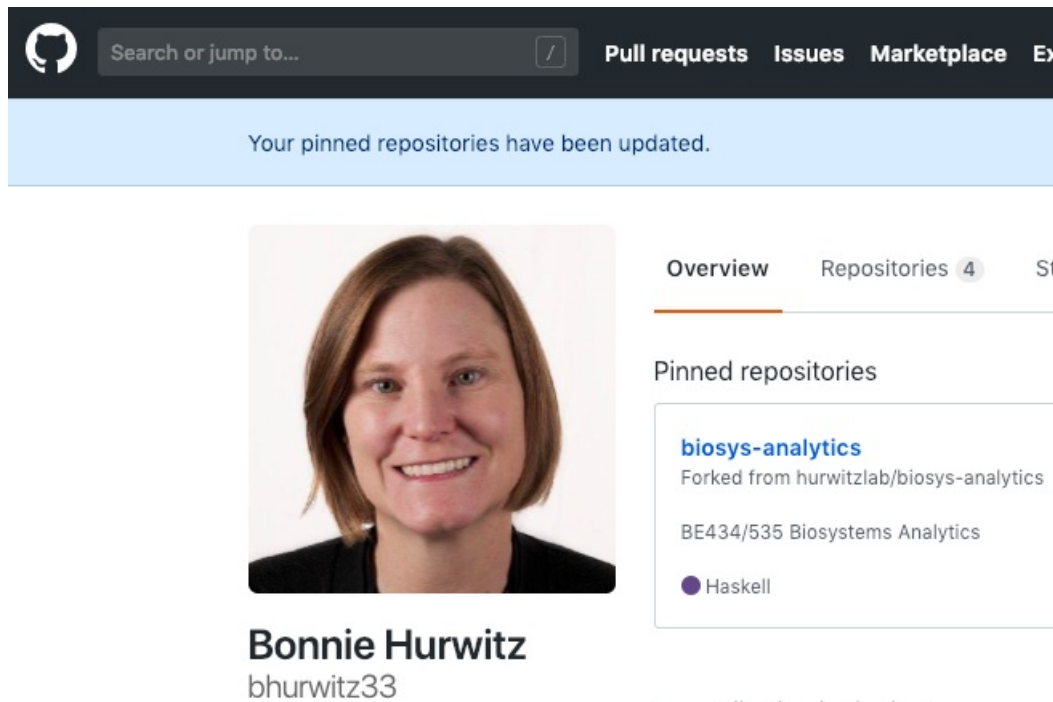

1 Login to http://github.com

2 Go to the class Github repository: https://github.com/hurwitzlab/biosys-analytics

3 Fork (or "copy") the class repository into your own Github account. This creates a copy of the repository in your own account that you can edit and update. Select your Github account as the place to "fork" the repository.
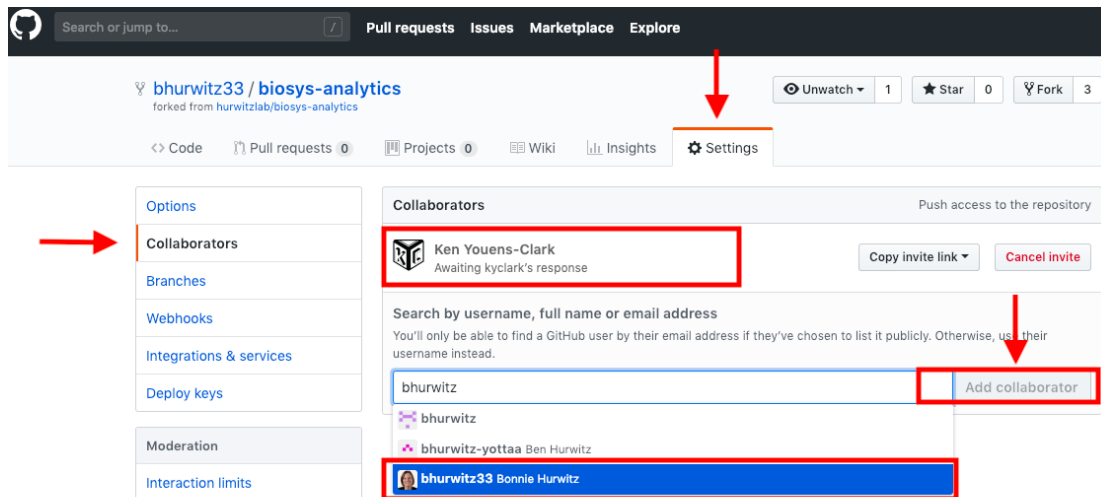

Forking (or copying the biosys-analytics repository). All homework assignments will be in this repository.

4 Go to your Github account. You will see a directory called biosys-analytics. This is your copy.

   http://github.com/my-username . (replace my-username with yours!)

5 Click on your "biosys-analytics" repository. Click on the "Settings" tab on the top bar, click on the "Collaborators" tab on the side bar, and search for & add the instructors as collaborators. The instructors Github usernames are: bhurwitz33 and kyclark.
